

Caparo Accles & Pollock (CA&P), part of the Caparo Vehicle Products group, is a specialist manufacturer of precision manipulated and coiled ridged tube assemblies supplying the automotive, aerospace, scientific, medical and military markets.

The most up-to-date  
manipulation and  
assembly facilities

CA&P is a major supplier of convoluted tube into the aerospace and allied industries. It is frequently specified for flexible hydraulic and fuel carrying pressure hose for fire resistant assemblies

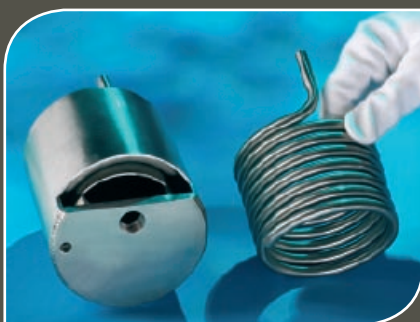

For over 100 years CA&P have been forming tube with integrity and innovation, resulting in many seemingly unsolvable challenges being analysed and mastered on behalf of our customers.

In the 21<sup>st</sup> century, new demands are made for new materials and ways of working with them. CA&P offer a combined approach to solving problems of engineering development which can be best described as advanced craft skills.

An extensive range of CNC controlled and mandrel bending machines manipulate tube over a wide range of sizes and materials. Dimensional accuracy is both ensured and maintained by linked CMM inspection facilities.

CA&P is a specialist in the art of tube coiling and have developed coiled tube assemblies for the aerospace, nuclear and heat exchanger markets

Our newly constructed temperature stabilized clean room facilities allow us to assemble high precision components under strictly controlled environmental conditions.

CA&P has recently installed two Luxstar laser welding heads which are located adjacent to the purpose built 10,000 class clean room facility with additional change area
