

At the cutting edge of the automotive industry, whether Formula 1, Indy racing, German Touring Car Championship or the luxury car market, all have one thing in common – Caparo Aluminium Technologies (CAT) casting technology. Since the early 80's CAT has developed a reputation for producing quality castings that give race designers and their teams the performance they need.

AMG V8 block

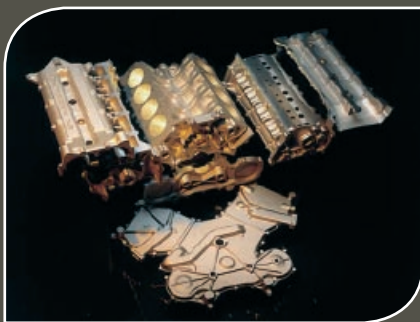

## Casting development and supply to the motorsport industry

Caparo Aluminium Technologies produce cylinder heads for NASCAR

From NASCAR, IRL, Le Mans, F1 and beyond, CAT counts among its customers some of the most famous names on the circuit. CAT castings have raced around the world's circuits with most of the top teams. Confidentiality is required to the highest level in this very sensitive area.

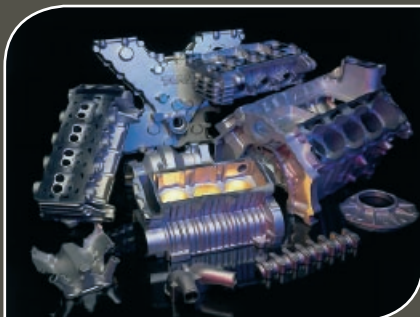

On-site design, development and casting facilities make CAT an obvious choice. Development work and casting is carried out in a separate area – ensuring that confidentiality is always maintained.

A complete set of castings for an Indy Racing League Engine

CAT's casting expertise for the motor racing industry is also applied on the road for performance marques like AMG, Viper, Lotus, TVR and Bugatti. Whether casting for super car or race car, CAT's consistent quality and precision casting ensures the right results – every time.
